Exercise 1 / March 1, 2023
HPC System Administration / WiSe 2022/23
20 Minutes Total

Exercise Introduction

Contents

Task 1: Service Catalog - Extend fields (5 min)

In the presentation a few possible entries have been presented briefly:

1. service-name
2. service-uuid
3. responsible
4. owner
5. service contact
6. availabilty
7. depends on
8. maintenance window
9. pricing

This list is quite short and not sufficient to describe a service thoroughly. Extend the list with further information required to describe a service.

Hints

- Consider both: organizational and technical aspects in regard to services

Task 2: Service catalog for Performance Data Dashboards and Security (15 min)

You have installed the TIG stack from the monitoring tutorial. Now you want to provide this as Service "Performance Data Dashboards" to the HPC customers and engineers. In order to put this service in production it has to be added to the service catalgue to provide information to the stakeholders.

Add this service to the service catalog.
