

Understanding GPU performance e.g. using MLCommons MLBenchmarks

Raza, Ossama Bin

Supervisor: Chirag Mandal

Table of Contents

- Introduction to GPUs
- GPU Benchmarks
- MLPerf HPC Overview
- MLPerf Training Overview
- Complexities in GPU Benchmarking
- Conclusion and Future Work

Introduction to GPUs [4]

- Core Specs
- Benchmarks
- Throughput
- Bandwidth
- Efficiency
- Architecture

GPU Market size, 2022 to 2032 (estimated)

Graph source: [GPU Market, Graphic Processing Unit Market Size 2023-2032 - Precedence Research](#)

GPU Applications [1, 4]

- Rendering Video Game Graphics
- Scientific Simulations
- Machine Learning
- Cryptocurrency Mining
- Professional Visualization

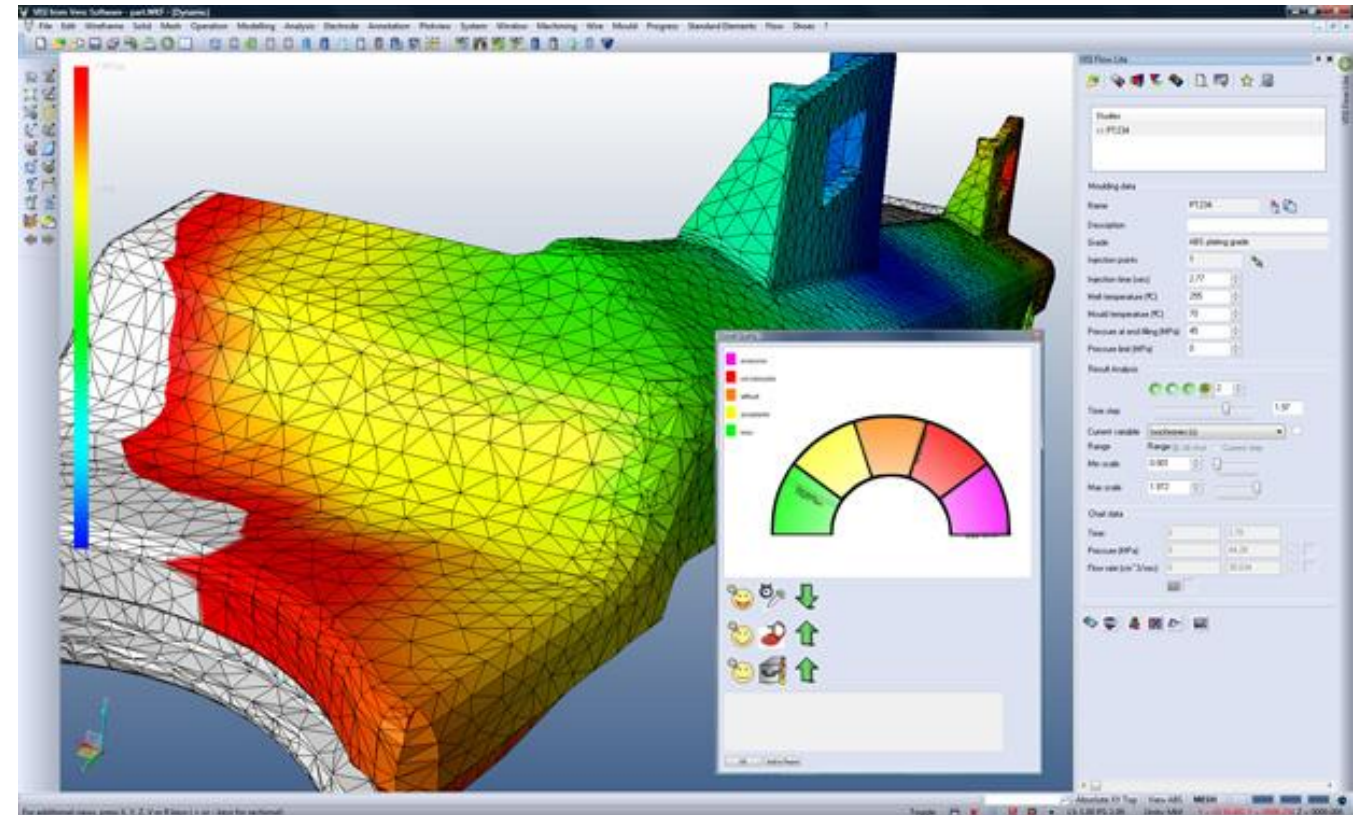

Image source: [The Artful Science of Mold Simulation - Digital Engineering 24/7](#)

Table of Contents

- Introduction to GPUs
- GPU Benchmarks
- MLPerf HPC Overview
- MLPerf Training Overview
- Complexities in GPU Benchmarking
- Conclusion and Future Work

Measuring GPU Performance [4]

- Data Transfer Speed
- Read/Write Speed
- Computation Speed

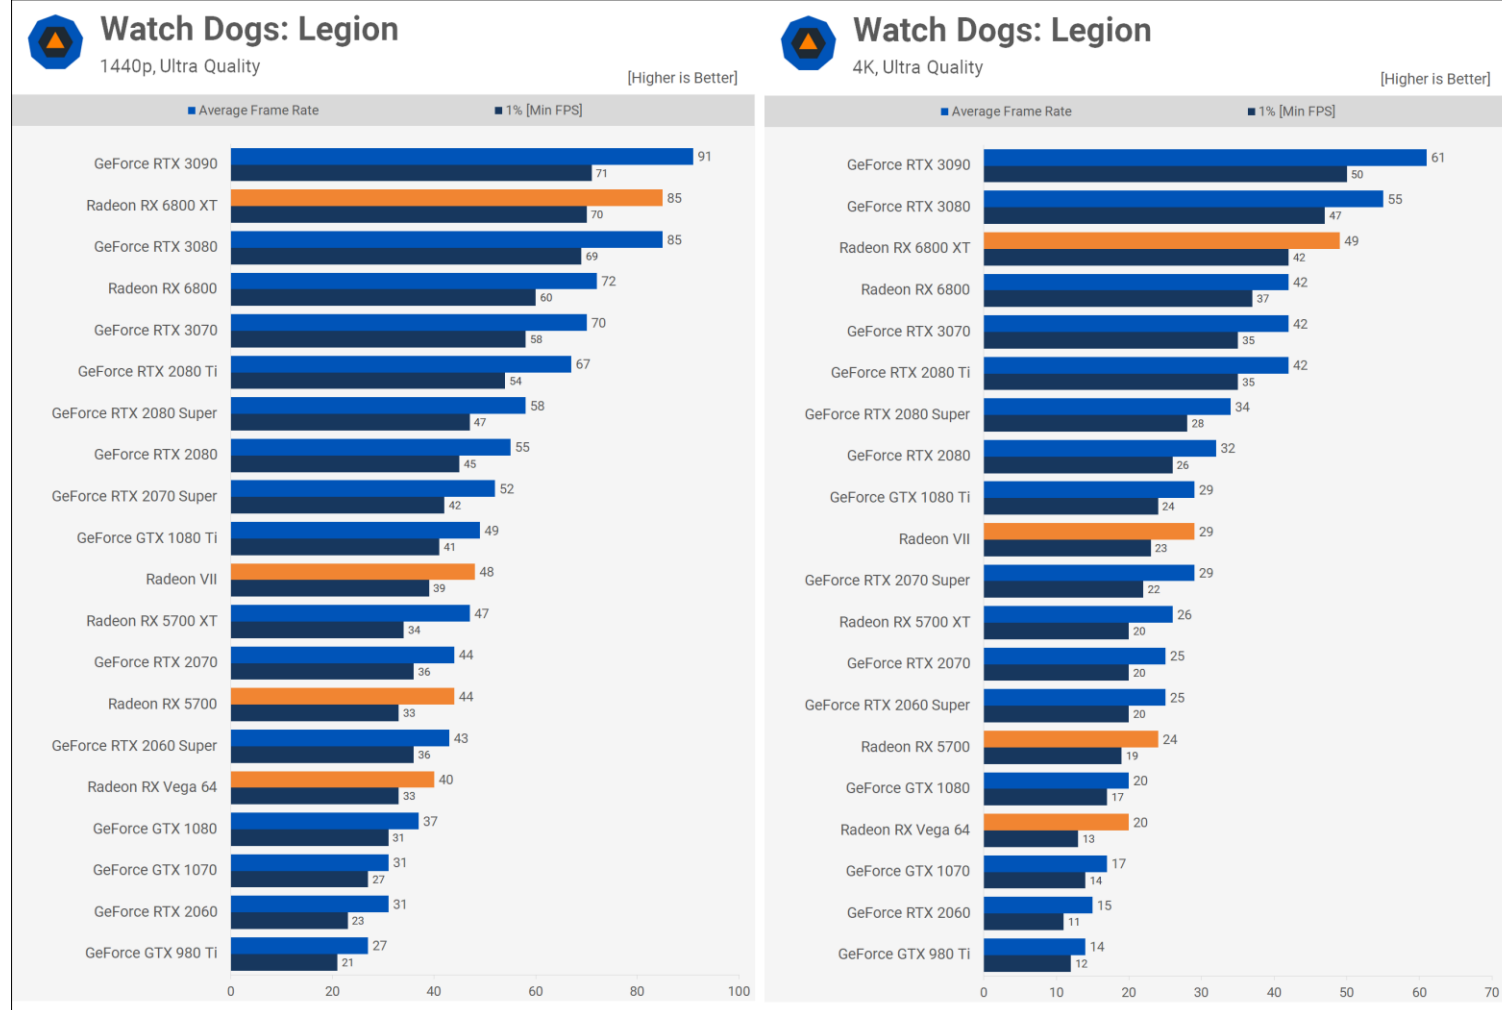

Image Source: [AMD Radeon RX 6800 Review - TechSpot](#)

Available GPU Benchmarks [13, 14]

- 3DMark
- Superposition
- Cinebench 2024
- FurMark
- In-game benchmarks
- PassMark Software
- MLCommons

Image source: [Julian M. Kunkel – HPDA Slides](#)

MLCommons Benchmark Categories [9]

- AI Safety Benchmarks
- MLPerf Training
- Scientific MLPerf Inference: Mobile
- Machine MLPerf Training: HPC
- Cryptocurrency MLPerf Inference: Tiny
- MLPerf Inference: Datacenter
- MLPerf Storage
- MLPerf Inference: Edge

Table of Contents

- Introduction to GPUs
- GPU Benchmarks
- **MLPerf HPC Overview**
- MLPerf Training Overview
- Complexities in GPU Benchmarking
- Conclusion and Future Work

Intro - MLPerf™ HPC Overview [8]

- Benchmark Suite:
 - ▶ Climate Segmentation (CAM5+TECA)
 - ▶ Cosmological Parameter Prediction (CosmoFlow)
 - ▶ Catalyst Modeling (Open Catalyst 2020)
 - ▶ Protein Structure Prediction (OpenFold)

- Key Metrics:
 - ▶ Time to Solution(TTS)
 - ▶ Throughput(optional)

Reference: [Benchmark MLPerf Training: HPC | MLCommons V2.0 Results](#)

MLPerf™ HPC Overview [3]

- Data Handling
 - ▶ Data can start on any durable storage (excluding RAM) as of v3.0
- Submission Requirements
 - ▶ TTS in every submission
 - ▶ Power measurements optional but encouraged
- Minimum runs per benchmark

Benchmark	Min. Runs
DeepCAM	5
OpenCatalyst	5
CosmoFlow	10
OpenFold	10

Reference: [Benchmark MLPerf Training: HPC | MLCommons V2.0 Results](#)

Closed Division Vs Open Division

- Closed Division:
 - ▶ Standardized Settings
 - ▶ Restricted Hyperparameters and Optimizers

To create a level playing field

- Open Division:
 - ▶ Flexibility in Implementation
 - ▶ Unrestricted Hyperparameters and Optimizers

Encourages innovation and optimization

Reference: [MLCommons: MLPerf™ HPC Training Rules | Github](#)

Problems Benchmarking HPC

- Requires all available resources
- Access restrictions
- Other work needs to be put on hold
 - ▶ Creates backlog
- Scale Adjustment
- Compliance and Validation
- Documentation

Table of Contents

- Introduction to GPUs
- GPU Benchmarks
- MLPerf HPC Overview
- **MLPerf Training Overview**
- Complexities in GPU Benchmarking
- Conclusion and Future Work

MLPerf Training [3]

- Relatively small scaled
- Not optimized
- Works using docker file
- Cover various domains
- Frameworks include
 - ▶ TensorFlow
 - ▶ PyTorch
 - ▶ TorchRec

model	reference implementation	framework
resnet50v1.5	vision/classification_and_detection	tensorflow2
RetinaNet	vision/object detection	pytorch
3DUnet	vision/image segmentation	pytorch
Stable Diffusionv2	image_generation	pytorch
BERT-large	language/nlp	tensorflow
GPT3	language/llm	paxml,megatron-lm
LLama2 70B-LoRA	language/LLM fine-tuning	pytorch
DLRMv2	recommendation	torchrec
RGAT	GNN	pytorch

Table source: [MLPerf™ Training Reference Implementations v4](#)

MLPerf Training (Benchmarks)

Area	Benchmark	Dataset	Quality Target	Reference Implementation Model	Latest Version Available
Vision	Image classification	ImageNet	75.90% classification	ResNet-50 v1.5	v4.0
Vision	Image segmentation (medical)	KiTS19	0.908 Mean DICE score	3D U-Net	v4.0
Vision	Object detection (light weight)	Open Images	34.0% mAP	RetinaNet	v4.0
Language	NLP	Wikipedia 2020/01/01	0.72 Mask-LM accuracy	BERT-large	v4.0
Language	LLM	C4	2.69 log perplexity	GPT3	v4.0
Language	LLM finetuning	GovRep r1/r2/r3	ROUGE score	Llama 2 70B	v4.0
Commerce	Recommendation	Criteo 4TB multi-hot	0.8032 AUC	DLRM-dcnv2	v4.0
Marketing, Art, Gaming	Image Generation	LAION-400M-filtered	FID<=90 and CLIP>=0.15	Stable Diffusionv2	v4.0

Table source: [Benchmark MLPerf Training | MLCommons Version 2.0 Results](#)

MLPerf Training (Benchmarks)

Area	Benchmark	Dataset	Quality Target	Reference Implementation Model	Latest Version Available
Marketing, Art, Gaming	Image Generation	LAION-400M-filtered	FID \leq 90 and CLIP $>$ =0.15	Stable Diffusionv2	v4.0
Graph neural network	Graph neural network (GNN)*	IGBH-Full	72% classification accuracy	R-GAT	v4.0
Vision	Object detection (heavy weight)	COCO	0.377 Box min AP and 0.339 Mask min AP	Mask R-CNN	v3.1
Language	Speech recognition	LibriSpeech	0.058 Word Error Rate	RNN-T	v3.1
Commerce	Recommendation	1TB Click Logs	0.8025 AUC	DLRM	v2.1
Research	Reinforcement learning	Go	50% win rate vs. checkpoint	Mini Go (based on Alpha Go paper)	v2.1
Vision	Object detection (light weight)	COCO	23.0% mAP	SSD	v1.1
Language	Translation (recurrent)	WMT English-German	24.0 Sacre BLEU	NMT	v0.7
Language	Translation (non-recurrent)	WMT English-German	25.00 BLEU	Transformer	v0.7

Challenges in GPU Performance Measurement

- Complexity of Applications
- Synchronization and Memory Transfers
- Variability in Workloads
- Hardware and Software Variations
- Benchmarking Limitations

Benchmarking [10, 11, 12]

- Cherry-Picking Benchmarks
 - ▶ Products shown in the best light
- Over-Optimization for Benchmarks
- Misleading Benchmarking Practices
 - ▶ Outdated benchmarks
 - ▶ Inappropriate workloads
 - ▶ Unfair comparisons
- Lack of Transparency
 - ▶ Not provide information about their benchmarking methodologies

Benchmarking – Example [5, 6]

- AMD Radeon RX 6000 series
 - ▶ Released in November 2020
 - ▶ Based on the new RDNA2 architecture
 - ▶ Performance benchmarked on SD2.1
 - ▶ Previous series (RX 5000) benchmarked on SD1.5
 - ▶ Promised a 1.65x performance per watt gain over RX5000
- Led to numerous controversies and AMD being publicly questioned

Benchmarking – Example [15, 16, 17]

- Nvidia's GeForce RTX 4090 graphics cards
 - ▶ Released in October 2020
 - ▶ Melting wires in the 16 pin 12VHPWR power connector adapter
 - ▶ Approximately 20 consumers reported this
 - ▶ Lawsuit seeking class-action status and was filed by Lucas Genova
- The lawsuit was dismissed
- Potential settlements and reasons of dismissal undisclosed

GPU bottlenecks Prevention

- CPU-GPU Balance
- Memory Access Patterns
- Parallel Scalability
- Data Transfer Speeds
- VRAM Limitations
- GPU Utilization
- Hardware Compatibility

Table of Contents

- Introduction to GPUs
- GPU Benchmarks
- MLPerf HPC Overview
- MLPerf Training Overview
- Complexities in GPU Benchmarking
- Conclusion and Future Work

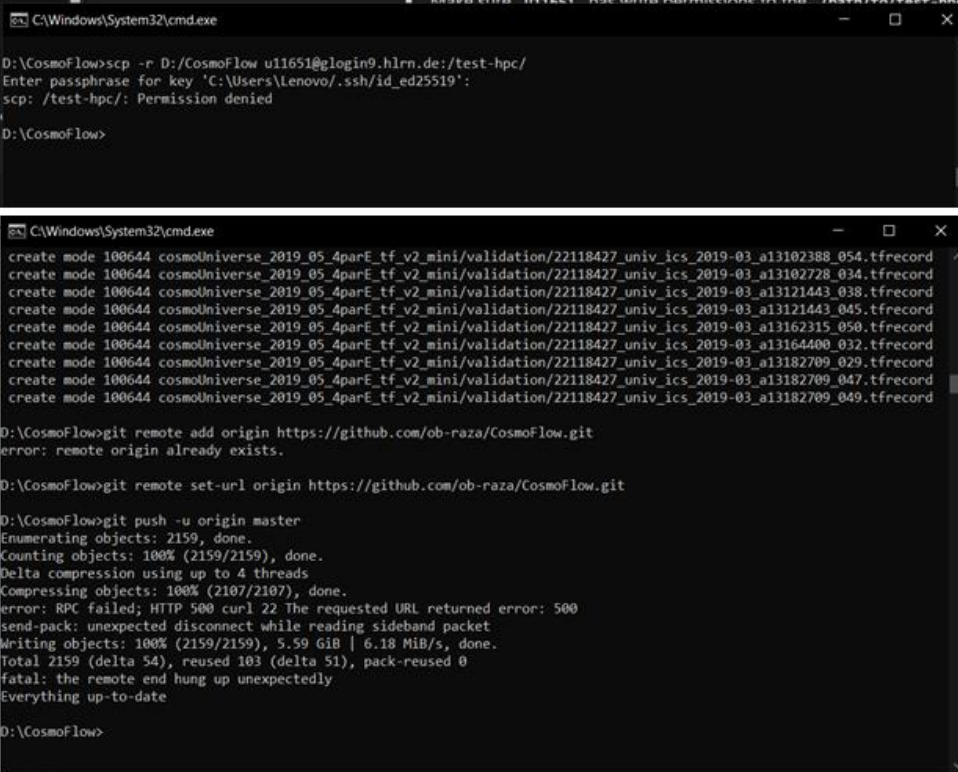

Future Trends in GPU Technology [19]

- AI and Machine Learning Integration
- New GPU Architectures e.g Nvidia's Hopper architecture
- Ray Tracing Technology
- Enhanced VR and AR Experiences
- Energy Efficiency and Sustainability
- The Rise of Cloud Gaming
- Custom GPUs for Specific Workloads
- Advancements in Rendering Techniques

Implementation: Progress and Problems

- Progress:
 - ▶ Working grete: shared and grete:interactive
 - ▶ Working Slurm script
 - ▶ Acquired benchmarks and datasets

- Problems:
 - ▶ Resource allocation delays
 - ▶ Github data upload error
 - ▶ Direct data upload error

```

Conclusion and Futurework

- Benchmark analysis
- Conducting a more in depth literature review
- Practical implementation
 - ▶ Troubleshoot existing problems
 - ▶ Run MLPerf Training benchmarks on different GPUs
 - ▶ Discuss finding in the final report
